Outline

Introduction: Individuation

HAPOC 2019 2/30

э

André Curtis-Trudel (OSU)

Introduction: Computational Individuation

What is computational individuation? A few different questions:

 What distinguishes physical systems that compute from those that don't?

• • • • • • • • • • • •

Introduction: Computational Individuation

What is computational individuation? A few different questions:

- What distinguishes physical systems that compute from those that don't?
- Among computing systems, what distinguishes those that perform the same task from those that don't?

Introduction: Computational Individuation

What is computational individuation? A few different questions:

- What distinguishes physical systems that compute from those that don't?
- Among computing systems, what distinguishes those that perform the same task from those that don't?
- Among those that perform the same task, what distinguishes those that perform the same task, in the same way, from those that don't?

< ロ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

Example: tri-stable circuit

• Q: why is this an issue?

イロト イポト イヨト イヨ

Example: tri-stable circuit

- Q: why is this an issue?
- A: even simple logic gates are 'computationally indeterminate'.

4 A N

Example: tri-stable circuit

- Q: why is this an issue?
- A: even simple logic gates are 'computationally indeterminate'.

 Computational entities, tasks, and ways of performing them are always individuated at least partly in terms of their semantic properties.¹

André Curtis-Trudel (OSU)

4 D K 4 B K 4 B K 4

- Computational entities, tasks, and ways of performing them are always individuated at least partly in terms of their semantic properties.¹
- Neutral with respect to kind of content, how content is determined.

¹Shagrir 2001, 2018; Sprevak 2010.

- Computational entities, tasks, and ways of performing them are always individuated at least partly in terms of their semantic properties.¹
- Neutral with respect to kind of content, how content is determined.
- States with same/similar contents are grouped together:

¹Shagrir 2001, 2018; Sprevak 2010.

- Computational entities, tasks, and ways of performing them are always individuated at least partly in terms of their semantic properties.¹
- Neutral with respect to kind of content, how content is determined.

HAPOC 2019

7/30

- States with same/similar contents are grouped together:
 - If H, M have same/similar content, favour OR grouping.

- Computational entities, tasks, and ways of performing them are always individuated at least partly in terms of their semantic properties.¹
- Neutral with respect to kind of content, how content is determined.
- States with same/similar contents are grouped together:
 - If H, M have same/similar content, favour OR grouping.
 - if M, L have same/similar content, favour AND grouping.

The causal-mechanical view

• Here the idea is that it is enough to look at the causal-mechanical structure of a system to determine computational status.²

²Coelho Mollo 2017; Dewhurst 2016; Piccinini 2007, 2015.
André Curtis-Trudel (OSU)
HAPOC 2019 8/30

The causal-mechanical view

- Here the idea is that it is enough to look at the causal-mechanical structure of a system to determine computational status.²
- Not obliged to consider content to determine computational structure in this case.

• And so on...

One road to pluralism

 One route to pluralism, although not the only route, goes by way of relativism.

• • • • • • • • • • • •

One road to pluralism

- One route to pluralism, although not the only route, goes by way of relativism.
- Relativism about some subject matter X is the view that something is an X only relative to some Y.

4 D K 4 B K 4 B K 4

One road to pluralism

- One route to pluralism, although not the only route, goes by way of relativism.
- Relativism about some subject matter X is the view that something is an X only relative to some Y.
- Pluralism about X arises when Y may take on multiple different but equally legitimate values.⁴

Modeling pluralism

• Relativism about modeling is the view is that something is a good model of a system only relative to some explanatory aim.

• • • • • • • • • • • • •

HAPOC 2019

Modeling pluralism

- Relativism about modeling is the view is that something is a good model of a system only relative to some explanatory aim.
- To the extent that different models may fulfill different explanatory aims, we get a kind of pluralism about scientific modeling.

A (10) A (10) A (10)

HAPOC 2019

Modeling pluralism

- Relativism about modeling is the view is that something is a good model of a system only relative to some explanatory aim.
- To the extent that different models may fulfill different explanatory aims, we get a kind of pluralism about scientific modeling.

HAPOC 2019

22/30

No need to view different models as 'competitors'.

Computational pluralism

• **Computational pluralism** is the view that there are multiple different but equally legitimate computational models.

A I > A = A A

HAPOC 2019

Computational pluralism

- **Computational pluralism** is the view that there are multiple different but equally legitimate computational models.
- The semantic and mechanistic individuation schemes (and perhaps others) home in on equally legitimate models, relative to different explanatory aims.

A (10) A (10) A (10)

Computational pluralism

- **Computational pluralism** is the view that there are multiple different but equally legitimate computational models.
- The semantic and mechanistic individuation schemes (and perhaps others) home in on equally legitimate models, relative to different explanatory aims.
- In keeping with the modeling perspective, we needn't view them as competitors. Instead, they are each better or worse suited to certain explanatory tasks.

HAPOC 2019

Individuation schemes concern resemblance

Figure: from Godfrey-Smith 2007.

HAPOC 2019 24/30

• Sometimes computer scientists wish to explain the behavior of a system described non-semantically.

4 A N

- Sometimes computer scientists wish to explain the behavior of a system described non-semantically.
- For example: performance of a given pipelining scheme (or some datapath modification in general) measured in instructions per second.

HAPOC 2019

- Sometimes computer scientists wish to explain the behavior of a system described non-semantically.
- For example: performance of a given pipelining scheme (or some datapath modification in general) measured in instructions per second.
- Here instructions are best individuated not in semantic terms whether it's an add or a multiply or whatever – but in terms of cycles to execute.

HAPOC 2019

- Sometimes computer scientists wish to explain the behavior of a system described non-semantically.
- For example: performance of a given pipelining scheme (or some datapath modification in general) measured in instructions per second.
- Here instructions are best individuated not in semantic terms whether it's an add or a multiply or whatever – but in terms of cycles to execute.

・ロット (雪) (き) (き)

HAPOC 2019

25/30

• Upshot: in these sorts of cases, a non-semantic model of computation is appropriate.

• Other times, computer scientists wish to explain 'semantically laden' tasks.

• • • • • • • • • • • • •

HAPOC 2019

- Other times, computer scientists wish to explain 'semantically laden' tasks.
- For example: why two systems compute the same arithmetic function.

HAPOC 2019

- Other times, computer scientists wish to explain 'semantically laden' tasks.
- For example: why two systems compute the same arithmetic function.
- Even if this also employs a non-semantic individuation scheme, e.g. of computational vehicles, a semantic scheme is required to answer the question about *function* computation.

HAPOC 2019

Upshots

• The modeling perspective fits computation into the broader context of scientific modeling.

• • • • • • • • • • • • •

Upshots

- The modeling perspective fits computation into the broader context of scientific modeling.
- To the extent that modeling pluralism is correct, even mundane, computational pluralism follows as a special case.

A (10) A (10)

HAPOC 2019

Upshots

- The modeling perspective fits computation into the broader context of scientific modeling.
- To the extent that modeling pluralism is correct, even mundane, computational pluralism follows as a special case.
- Questions about computational individuation turn out to be questions about which computational models are appropriate for different explanatory purposes – but there no special problems here for computation.
